

Bike Store Doors

For cyclists who reside in communal housing, finding a secure place to store and lock up your bike can be a major headache due to bike theft now being commonplace. Bike locks can **easily be cut** on stands outside, leaving cyclists out of pocket and without a bike. Our secure **Bike Store Doors** are a great solution to keep bikes safe and secure.

Our Bike Store Doors are built from **high quality stainless-steel frames**, which feature a **lower solid anti-scuff panel**, and an **upper vision panel**, because there is always the chance a bike wheel may impact it.

We fit the upper vision panel, made from secure **anti-bandit glazing**, to provide both light and natural surveillance. A metal bike store door with all solid panels is actually a security risk, in itself, as there is always the chance that someone dangerous is lurking either outside or inside waiting for a cyclist to appear.

The vision panel reduces that threat in addition to improving the look of the block and bike store.

The stainless-steel that we build our door frames out of is **strong, durable and weather resistant**.

Weather resistance is an important factor when it comes to a door securing a bike storage room, as often the room it is outside and separate from the housing block and exposed to the elements. **Other materials such as mild steel will suffer from rust due to exposure**, ultimately leading to increased maintenance or even replacement.

If you are interested in our Bike Store Doors or would like to know more about our range of Communal Entrance products, please call us on 0121 706 8400 or email us at sales@warrordoors.co.uk
